Projects

Development Date 2022

Roulette Game

- A basic program that uses probabilistic mechanics to have variations to the output of the gamemode. The game also features rpg dialogues to engage its users to the lore and world building of the game.
- The program is developed using the C language with CodeBlocks serving as its IDE

Development Date 2023

Login System with Database

- A basic login system using JavaGUI to create an interface with its core being the storage of information of its registered users.
- The UI displays a simple coffee purchase system wherein the customers can select the product they wish to buy and the payment methods available per item.
- The system also includes a simple MySQL database to create, record, store, modify, and delete user data.
- The interface and its source code is done through Java with its IDE being NetBeans

Development Date 2023

PlainText Encryption & Decryption

- Encryption and Decryption of Plaintext using rudimentary applications of binary encryption
- The Project is developed using C++ Language and Codeblocks as an IDE
